

# Quéptico (QPT): A Sustainable and Decentralized Cryptocurrency

Quéptico (QPT) is a cryptocurrency built on the Binance Smart Chain, designed to provide a solid, accessible, and fair solution for investors looking to participate in a decentralized and sustainable financial ecosystem. The project was created to offer staking rewards, a transparent pre-sale system, and mechanisms that promote decentralization and community prosperity.

Based on principles of scarcity, adherence to smart contracts, and the decentralization of power, QPT aims to build a thriving and enduring economy where the community plays a key role in the long-term governance and sustainability of the project.

# Fundamental Principles of Quépticoín

Quépticoín was conceived after years of research into economics, anarcho-capitalism, and decentralized systems. The project is built on three core principles:

1. Controlled scarcity of the currency, preventing unchecked inflation;
2. The inviolability of smart contracts, ensuring stability and trust;
3. The decentralization of power, which gradually transfers control to the community of investors.

Once the project completes all phases of its roadmap, the original team will step down, allowing the community to take the reins. This will establish a virtuous cycle of renewal and continuous innovation.

# Sustainability and Growth

## Limited Supply

Maximum supply fixed at 17 million tokens, ensuring programmed scarcity to maintain the asset's long-term value.

## Smart Staking

Monthly dividends of 2% to 6% incentivize capital lock-up, reducing circulation and promoting appreciation.

## Strategic Distribution

Careful planning to ensure wide decentralization and prevent power concentration among few investors.

## FLiquidity Fund

1 million tokens reserved to ensure exchange liquidity and investor security, preventing sharp price fluctuations.

Quépticoín was designed with a deflationary and highly scalable economic model, aiming for long-term sustainability and organic community growth. Furthermore, the currency will serve as a native payment method for future ecosystem projects, including marketplaces, games, and next-generation reward systems.

# Tokenomics and Distribution

Quéptico (QPT) has a fixed supply of 17,000,000 tokens, strategically distributed to ensure stability, community incentives, and project sustainability. The token operates on the Binance Smart Chain (BEP-20) network with contract address `0x3f18ee40f901303ecb3b5e1a2a28e4f954cc6288`.

This structure ensures that the majority of tokens will be used to incentivize the community and long-term holders, promoting a healthy ecosystem with continuous growth.

# Fases da Pré-venda

## Round 1

300.000 QPT at **US\$ 0,01** per token

## Round 2

700.000 QPT at **US\$ 0,10** per token

## Round 3

1.000.000 QPT at **US\$ 0,20** per token

## Round 4

1.000.000 QPT at **US\$ 0,30** per token

## Round 5

1.000.000 QPT at **US\$ 0,40** per token

## Round 6

1.000.000 QPT at **US\$ 0,50** per token

The Quépticoín (QPT) pre-sale will be carried out in 6 progressive rounds, with gradual price increases and decentralized offering, totaling 5,000,000 tokens. This structure ensures progressive appreciation of the currency, benefiting early supporters and encouraging decentralization of token distribution.

# Staking System

Period	Monthly Income	Total Yield
2 Months	2%	4%
4 Months	3%	12%
6 Months	4%	24%
8 Months	5%	40%
12 Months	6%	72%

The Quépticoín staking system will be activated after the completion of the pre-sale, when all 5 million QPT are completely sold. Users who allocate their tokens to staking will receive monthly rewards ranging between 2% and 6%, potentially reaching up to 72% annually. Withdrawals can only be made after the completion of the chosen staking cycle, according to the table above. To participate, it's necessary to allocate the equivalent of \$5 in QPT. The earnings do not follow the banking compound interest system, yet still generate significant returns in a more solid and consistent manner.

# Security and Objective

## Security

- Auditable, transparent and verified contract on BSC
- Secure sales, ensuring currency value stability
- Limited currency supply, guaranteeing sustainable economy
- Decentralized and fair economy
- Inflation and negative variation prevention mechanism
- Smart stake with programmed withdrawal delay

## Objectives

Our goal is to create a solid and accessible currency, focused on stability, community participation and rewards for long-term holders. With a fair staking system and balanced pre-sale policy, we aim to build an engaged and prosperous user base.

Quépticoín believes in a future where anyone can prosper financially through accessible, smart and decentralized systems. The community is the key to everything.
